Preliminary Hip Dysplasia Evaluation Report

No radiographic evidence of hip dysplasia is present. The consensus evaluation is: **GOOD**

EXCELLENT HIP JOINT CONFORMATION

Superior hip joint conformation as compared with other individuals of the same breed and age.

GOOD HIP JOINT CONFORMATION

Well formed hip joint conformation as compared with other individuals of the same breed and age.

FAIR HIP JOINT CONFORMATION

Average hip joint conformation as compared with other individuals of the same breed and age.

BORDERLINE HIP JOINT CONFORMATION

Marginal hip joint conformation of indeterminate significance. Further evaluation is advised.

MILD HIP DYSPLASIA

Early radiographic evidence of minor dysplastic changes of the hip joints.

MODERATE HIP DYSPLASIA

Well radiographically evident evidence of dysplastic changes of the hip joints.

SEVERE HIP DYSPLASIA

Strong radiographic evidence of marked dysplastic changes of the hip joints.

RADIOGRAPHIC FINDINGS

- ☐ subluxation
- ☐ retarding of failure of the acetabulum
- ☐ osteoarthritis (exposed bone joint disease)
- ☐ of bone structure
- ☐ skeletal structure change

- ☐ unilateral ☐ left ☐ right
- ☐ transitional vertebrae
- ☐ spondylitis
- ☐ parosteoma
